BACKHOE

Incredible digging power

Reach a digging depth of 7.5 feet with the BH76 backhoe. The bucket has a maximum digging force of 3,339 pounds and 2,097 pounds for the dipper.

Subframe structure

With the performance matched BH76 backhoe, there's no need to remove the subframe. It works with the loader installed, and it doesn't interfere with the mid-mount mower linkage. Plus, it also allows 3-point usage without having to remove the subframe.

Compact lever link cover

Incorporating a stylish, compact design, the lever link cover increases foot/legroom as well as visibility.

Protected hoses

All hoses are routed through the backhoe arm. Not only is it a cleaner design, the hoses are protected for longer life.

Control valve

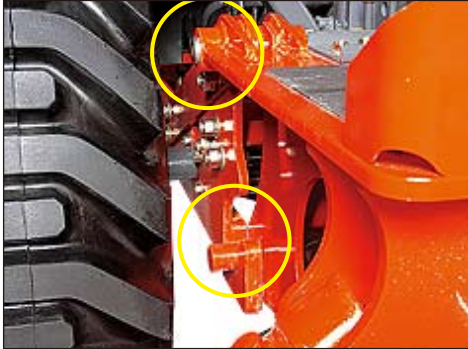

The high performance control valves on the BH76 backhoe provides you with smooth, efficient backhoe control that's comparable to an excavator.

Kubota

BACKHOE

4-point quick-attach system

Utilizing a pin, a hook-type quick-attach system, and requiring no tools, the backhoe can be attached in minutes with the quick-attach system.

Mechanical Thumb (Optional)

Kubota's BH76 is also available with an optional 6-position mechanical thumb, for expanded capabilities and efficient material handling.
