BACKHOE

Reversible Seat

The BH76's new, standard reversible seat gives the operator more than enough legroom to comfortably take on backhoe work all day long. This convenient seat swivels from front to back to save space and make operation more efficient, and slides forward and backward for a custom fit.

Large Operator Platform

The new reversible seat and a compact backhoe control lever console offer a spacious platform area for comfortable backhoe operation. Additionally, the backhoe connects closer to the tractor, enhancing overall balance.

4-point Quick-attach System

With its pin-and-hook type quick-attach system, the backhoe can be attached in minutes—without tools. And, with four connecting points for structural integrity, tractor balance is improved.

Incredible Digging Power

The BH76 offers an impressive digging depth of 7.6 feet and boasts more than 3,300 pounds of bucket breakout force.

Protected Hoses

All of the hoses are routed through the durable backhoe arm for a streamlined design and enhanced protection.

Mechanical Thumb (Optional)

Kubota's BH76 is also available with an optional 6-position mechanical thumb, for expanded capabilities and efficient material handling.

Subframe Structure

There's no need to remove the BH76's subframe—it operates with the loader installed, and doesn't interfere with the mid-mount mower linkage. In addition, it allows 3-point implement usage with the subframe still in place.
