

BX

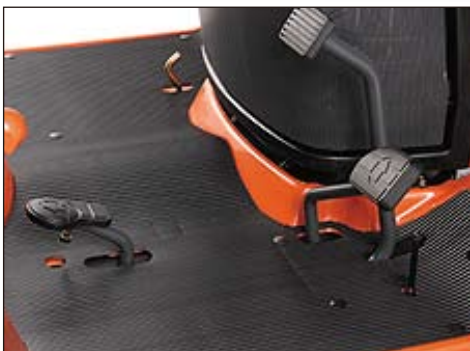

BX25

FEATURES

Powerful Kubota Diesel Engine

The BX25 is equipped with a 23 HP diesel engine. This 3 cylinder workhorse offers unparalleled power for a tractor this size, and more than enough muscle for all your gardening and mowing duties.

2-Pedal HST Operation

When frequent changes in speed and direction are needed, HST responds with its smooth operating forward and reverse pedals, leaving your hands free for steering and implement control.

Cruise Control

For carefree mowing of large spaces, set the BX-Series' cruise control to maintain a constant speed without keeping your foot on the forward pedal.

Versatile Category I 3-Point Hitch (Optional)

Put your BX-Series to work with its Category I 3-point hitch. This sturdy, hydraulically controlled hitch allows you to attach a wide array of rear implements.

Hydrostatic Power Steering

A standard feature on all BX-Series tractors, power steering makes steering practically effortless, thus reducing stress and fatigue.

BX25

FEATURES

Reversible Seat

Switching from loader use to backhoe use is as simple as lift and spin. The BX25's seat easily shifts forward and back.

Spacious Operator Area

The pedal layout on BX-Series tractors helps aid operator comfort. The forward and reverse HST pedals are split and the differential lock is located on the side of the seat. This design provides a larger deck area, which offers more foot room, eliminating the cramped feeling of most other tractors in this class.

Digital Tachometer

The BX-Series tractors feature a digital tachometer that offers operators precise monitoring of engine revolutions, especially when operating the PTO. When the engine is off, the digital tachometer displays the hour meter.

Foldable ROPS

A foldable, quick-adjust Rollover Protective Structure comes standard on the BX25. Fold it from 180° to 90° without tools—perfect for passing under areas with height constraints. (Note: Kubota recommends that the ROPS be in the up position during most operations.)

Quarter-Inching Valve

With increments of ¼" at the lower link end, our quarter inching valve provides easier implement control. The lever guide's regulator allows smaller adjustments, which are often required when attaching/detaching 3-point mounted implements or when performing sensitive jobs.

Kubota

FEATURES

Bright Halogen Headlights

The halogen headlights of the BX offer a clear bright light at dawn, dusk or dark of night. Furthermore, their casing and style have been designed to give the tractor a sleeker look.

Reverse Air Flow

The radiator of the BX-Series is positioned in the middle of the tractor rather than the front. So, airflow is taken in from the operator area and pushed towards the front of the hood. This helps reduce overheating, prevents grass from getting in the radiator grill and keeps the operator cooler.
