BACKHOE

Curved Boom

The curved boom of the BX25 offers some real advantages. Its arched design allows you to dig deeper, keeping the boom out of the way of the edges of the excavation area. It also increases the lifting height.

Easy Implement Attach/Detach

The compact backhoe is equipped with a no-tools-required, 4-point attach/detach mounting system. This makes attaching or detaching the backhoe and front loader, as well as many other implements, a snap.

20° Angle of Departure

The BX25's 20° angle of departure makes it easier to load the tractor onto trailers without removing the backhoe and it allows you to ascend steeper inclines.

Levers

The BX25 comes with a lever boot on the bottom part of the lever. This offers increased durability and smoother operation.

Protected Hoses

The hydraulic hoses are tucked inside the backhoe boom. This helps to increase the longevity of the hoses by protecting them from damage and the elements.

BACKHOE

More Legroom

The operator's step in front of the backhoe offers a more accommodating leg and foot area.
