## FRONT LOADER

### Lifting Capacity

The L45's productive hydraulic system means heavy-duty loads are no match for its 2,200 lbs. lifting capacity and 9' 6" lifting height.

### Auto-leveling Valve

The auto-leveling valve automatically keeps the bucket or pallet fork horizontal as the loader boom raises and lowers. The On/Off switch deactivates the system for greater operator control. Spills are reduced, while pallet fork operation and loading jobs are made easier.

### Slanted Boom Design

Slanted to match the L45's hood, the front loader boom design provides operators with a greater field of view when changing attachments. It also gives the tractor a more sleek and modern appearance.

### Protected Hoses

The hydraulic hoses are routed through the L45's loader boom for clearer operator views, as well as increased hose protection and durability.

### Brace-less Frame

The L45's brace-less loader frame design improves visibility over the hood, to the side and when servicing the engine. It helps you to be safer, more productive and more efficient.

## FRONT LOADER

### Quick Coupler

The quick coupler is simple to use and dependable. Quick, easy on/off buckets and pallet forks require no tools, only mounting pins and hose couplers. So, you can move onto the next task in a matter of minutes.

### Optional 3rd Function Valve

The L45 can be equipped with our optional 3rd function valve. This large-capacity (11.8GPM) valve makes Skid Steer-type attachments, such as augers and sweepers, easier to operate.

### Front Guard

Beautiful protection. The front guard is engineered to match the L45's sleek, slanted hood and loader design.
