FRONT LOADER

Rounded Boom

The front loader features a rounded boom that matches the hood, for a sleek look and increased visibility during loader operations.

4-bar Linkage

The 4-bar bucket linkage increases the rollback and dumping angle for quicker scooping and dumping.

High-quality Cylinders

The LA844 loader features high-quality, heavy-duty cylinders to bring more muscle to your loader work. The durable plating offers impressive pressure resistance and achieves superior rust protection.

Front Guard (optional)

The MX4700 and MX5100's front guard provides additional front-end protection and folds down for quick and easy hood access.

Joystick Control

The joystick offers you the ability to control the movement and speed of the loader with a single lever. The Series Circuit makes simultaneous boom and bucket operation possible, while the Regenerative Bucket Dump Circuit enables quick dumping for efficient operation with quick cycle times.

FRONT LOADER

Protected Cylinder Tubes

To protect the tractor's hydraulics and offer the operator greater visibility, we've neatly tucked the hydraulic tubes in a recessed area in the loader's boom. Hydraulic tube covers provide further protection from wear and tear.

Quick Coupler (optional)

The front loader can also be used with optional quick attachments, such as buckets, pallet forks and bale spears. Simple to attach and detach, this handy option doesn't require the use of tools, saving time and effort.

Easy Attach/Detach

No tools are required to remove the loader from the tractor. Just use the tractor's hydraulics to lift and separate the loader from the tractor.

Easy to service

Most grease points are on the end of pivot pins for easy access.
